

A DIVISION OF ACCOLADE TECHNOLOGIES

One-Touch Point-of-Sale Systems Coordinating Ordering, Make Line, Delivery, Back Office and Video Security Systems for Pizzerias & Restaurants

Delivering Intelligent Solutions

Accolade Technologies

Your business depends on management tools, resources and techniques that will keep it consistently ahead of your

competition. We at Accolade Technologies know that. Our company was founded by a veteran computer programmer who was also a multiple restaurant owner. Facing the same problems as everyone in our industry experiences, he was frustrated by the lack of effective management, marketing and cost control software solutions which specifically target our concerns. He decided to form an elite team of restaurant owners, consultants and systems analysts to tackle the problem. The result, after several years of design, development, testing and real time use is AccoladePOS[™].

How it Works

Simply put, you want your point of sale system to be powerfully capable, yet simple, friendly, easy to use, and just as important, reliable.

A helping hand that thinks like you do especially when you're not there to manage your business. The **AccoladePOS**[™] families of products do just that. They seamlessly combine front of the house activities such as order entry, table service control and delivery with back of the house functions like real time inventory, purchasing, food preparation and employee controls. Nothing is left to chance or estimation. Every action causes a predictable reaction. Using tightly integrated event driven modules, every condition is accounted, every variable is controlled. And when we say 'Real Time' we mean just that. There is no need to wait until the end of the day to view sales, profits, food costs, labor costs, driver/labor efficiency and inventory balances. AccoladePOS[™] allows real time tracking and reporting that delivers vital business information to you when you need it.

Pizza Enterprise

Multi-workstation system designed specifically for the Pizza industry.

Pizza Lite

Affordable single station stand alone system improves your pizza business efficiency.

Table Service

Combines intuitive server entry, inventory and labor control system, plus superb reporting. designed that functionality into the software from the start. Simply select how you want to operate from the many configuration choices, and go. From a simple ordering and cashier station configuration to a fully capable delivery system with multiple video make lines, inventory, purchasing, employee hour keeping, and superb reporting and marketing, you use the same software, without additional charge. You will especially appreciate our advanced features, included in every system. With built-in Caller ID, marketing, coupon builder and control, you easily stay in contact with your customer for repeat business generation. Advanced reporting means you get an inside out view of your business operation with nothing left to chance.

POS Table Service

If your restaurant emphasizes a table service environment, you'll like our AccoladePOS[™] Table Service. This version of our software is packed with the same outstanding features as AccoladePOS[™] Pizza Enterprise and adds a whole new dimension of flexibility to our family of products. Tables and seating are graphically represented on the server screen. With a simple touch the server gains access to the ordering information. Remembering table numbers, searching for table checks and lost orders are completely eliminated for a smooth efficient server and customer relationship. With advanced features such ticket spitting, open ticket reordering, pivot seating, and server table exchange and gratuity functions this version of AccoladePOS[™] could be just the answer for your establishment.

For Your Specific Needs

AccoladePOS^{\bowtie} is scalable. That means it will grow with you, never becoming obsolete or inadequate. We

Ordering Consistency

When it comes to order entry, there is no substitute for speed and accuracy. Our ergonomic layout provides fast response, with minimal key strokes. Caller ID, Customer name and phone number are all displayed on the main screen. With features designed for the Pizza industry, pop-up panel's automatically prompt for topping selections and positions. Using "real words" not codes to describe toppings, increases employee efficiency and eliminates mistakes. You can even change pizza sizes without reentering the toppings.

Kitchen Make Line

At the heart of the kitchen process is our powerful Video Make Line system. AccoladePOS[™] powers up to six make line stations with multiple kitchen printers and item designated routing. Send pizza orders to your pizza make line, cold sandwiches to the deli table and salad orders to the salad station. Continuous monitoring of vital statistics such as load times and item counts increases daily production efficiencies. Features include visual notification of order modification, color coded order types and completed order status.

Assign and Deliver

Every operation's ultimate goal is the timely and efficient delivery of a quality product. With our comprehensive delivery tracking system, orders are conveniently displayed and assigned to drivers. Assignments may be made based on next driver available, delivery zones, or specified assignment. Performance is tracked in real-time, based on time and delivery efficiency. A complete cashiering system accompanies this module, providing customer check tracking, coupon tracking and driver advances or deposits. With four driver remuneration options you can choose mileage, per item, flat rate, or a percentage of order amounts.

Back Office

Simple or Complex, it is up to you. Our AccoladePOS[™] family of Point of Sale systems provide flexible configuration. With a tightly integrated application you have easy access with up to the minute inventory control, purchasing, product control and accounting functions. You'll find programming your menu is just as easy. A simple interface allows you to make changes and instantly verify the new menu operation. We offer support for multiple tax methods, discount options and programmable discount tables, multiple revenue center reporting, and a coupon builder; just some of the outstanding built in features.

Video Integration

Our IP Digital Video Module protects your bottom line. Tightly integrated to point of sale, you can track dozens of events from cashiering to employee time clock functions. Replay events at the touch of a button. Search a cashiering event, request the video and view a clear, crisp replay of the transaction. By displaying the customer ticket for comparative side by side viewing of the operation, accuracy of events can be verified. By tracking employee clock-in or out you can eliminate buddy clock-in and payroll fraud. Question about a coupon; record each transaction and provide a visual record of the exchange. Keep an eye on your business with internet access to your store and view live operations from home.

Single & **Multi-Station** Systems Available

A POS Solution That Delivers Results

In the frantic environment of the successful pizzeria, matching speed with accuracy is the key to success. As successful owners and operators you rely on the tools you implement to increase your businesses productivity. At **Accolade Technologies**, we're building solutions that put intelligence into your business with measurable results. Our Point-of-Sale solution was designed by a team of owners and operators that understand the business. We deliver world-class solutions that will increase your business efficiency with bottom line results.

Here's what our customers say...

"I can't believe the AccoladePOS system works so well, it has lightning fast speed and the easy to use order interface has really increased our bottom line profit." Chubbys Pizza

"After 6 years in the business, we found our POS system was falling short of the mark and found so many other systems just didn't fit our business. Now after using Accolade's POS Pizza Lite, all of our needs are met and then some. I can't imagine how we ran the business before implementing the AccoladePOS system."

Five Burroughs Pizza

"The AccoladePOS system had everything we needed to improve our business operations. To build a personal touch with our customers, we love it's built in customer tracking and marketing feature. With real-time order history we can track specific sales and know what they ordered last time. Using four stations we've really maximized what we can get out of our POS system." Big Todd's Pizza

"We have four pizzerias in four different towns and we can't be everywhere to monitor each one. AccoladePOS allows us to review sales, inventory, production and security on a daily basis without leaving our central office. AccoladePOS has tightened our ship and made us more relaxed by keeping us closer to daily activities." The Big Slice Pizzeria

We pride ourselves in TOTAL customer satisfaction with World Class Service and Support. Your future needs are always our concern. Our relationships with leading providers of complimentary products enable us to deliver comprehensive solutions that meet your business goals. Our staff of experienced business consultant's can design a system specifically for you. Take the first step to find the peace of mind that using **AccoladePOS**^{*} can provide.
